PATENT Atty. Okt. No. WEAT/0394

Ø1003/010

IN THE CLAIMS:

1. (Currently Amended) A method of treating a well, comprising:

positioning a selective treatment assembly with a plug assembly in a wellbore proximate an area of interest, the selective treatment assembly having a treatment portion:

PATTERSON&SHERIDAN

treating the area of interest;

isolating a treated portion of the wellbore from an untreated portion by removing [[a]] the treatment portion of the selective treatment assembly from the wellbore;

equalizing the pressure between the untreated portion of the wellbore and the surface of the well; and

completing the well.

- 2. (Original) The method of claim 1, further including activating a seal assembly on the treatment portion to isolate the area of interest.
- 3. The method of claim 2, further including deactivating the seal (Original) assembly and urging the selective treatment assembly toward the surface of the well.
- 4. (Original) The method of claim 1, further including pumping fluid through a plurality of injecting ports on the treatment portion to treat the area of interest.
- 5. (Previously Presented) The method of claim 1, further including seating the plug assembly in a polished bore receptacle disposed in a string of casing thereby separating the treated portion of the wellbore from the untreated portion.
- 6. The method of claim 5, further including disposing a string of production tubing in the wellbore and attaching it to the polished bore receptacle.

PATENT Atty. Okt. No. WEAT/0394

→ USPTO

- 7. (Previously Presented) The method of claim 5, further including positioning a retrieval tool adjacent the plug assembly and removing the plug assembly from the polished bore receptacle.
- 8. (Cancelled)
- 9. (Original) The method of claim 1, further including positioning a perforating gun proximate the area of interest and perforating a string of casing.
- 10. (Previously Presented) The method of claim 1, wherein the plug assembly is secured to the lower end of the selective treatment assembly by a mechanical connection.
- 11. (Previously Presented) The method of claim 10, further including releasing the mechanical connection to separate the plug assembly from the selective treatment assembly.
- 12. (Original) The method of claim 11, wherein the mechanical connection is a shear pin.
- 13. (Previously Presented) The method of claim 1, wherein the plug assembly includes an x-lock profile formed on the outer surface thereof.
- 14. (Previously Presented) The method of claim 13, further including seating the x-lock profile on the plug assembly in a profile formed in a polished bore receptacle.
- 15. (Original) The method of claim 1, wherein the selective treatment assembly is inserted into the wellbore by coiled tubing.
- 16. (Original) The method of claim 1, wherein the selective treatment assembly is inserted into the wellbore by coiled tubing and a string of jointed pipe.

PATENT Atty. Dkl. No. WEAT/0394

2005/010

17. (Original) The method of claim 1, further including moving the selective treatment assembly to a second area of interest to isolate and treat the second area of interest.

PATTERSON&SHERIDAN

18. (Currently Amended) A method of treating a well, comprising:

inserting a selective treatment assembly with a plug assembly disposed at a lower end thereof into a wellbore that is at least partially lined with casing;

positioning the selective treatment assembly proximate an area of interest;

isolating and treating the area of interest by activating the selective treatment assembly;

deactivating the selective treatment assembly and urging the selective treatment assembly and the plug assembly toward the surface of the well:

seating the plug assembly in a polished bore receptacle disposed in the casing thereby-separating isolating a treated portion of the wellbore from an untreated portion by removing the selective treatment assembly from the treated portion of the wellbore;

equalizing the pressure between the untreated portion of the wellbore and the surface of the well:

removing the selective treatment assembly from the wellbore; removing the plug assembly; and producing the well.

- 19. (Original) The method of claim 18, further including positioning a perforating gun proximate the area of interest and perforating the casing.
- 20. (Original) The method of claim 18, further including disposing a string of production tubing in the wellbore and attaching it to an area above the polished bore receptacle.
- (Original) The method of claim 18, further including positioning a retrieval tool adjacent the plug assembly.

PATENT Atty. Dkt. No. WEAT/0394

- 22. (Original) The method of claim 18, further including releasing a mechanical connection that secures the plug assembly to the selective treatment assembly.
- 23. (Original) The method of claim 18, wherein the selective treatment assembly and the plug assembly are inserted into the wellbore by coiled tubing.
- 24. (Original) The method of claim 18, wherein the selective treatment assembly and the plug assembly are inserted into the wellbore by coiled tubing and a string of jointed pipe.
- 25. (Withdrawn) An apparatus for treating a portion of a wellbore, comprising:
- a selective treatment assembly having a treatment portion with injecting ports and a selectively settable seal assembly at each end thereof; and
- a plug assembly secured to the selective treatment assembly by a releasable mechanical connection.
- 26. (Cancelled)
